

SHEQsys

THE ULTIMATE
SHERQ
& **FACILITIES**
MANAGEMENT SOLUTION

GET SHEQ DONE

SHEQsys is a powerful, web application that empowers organisations to proactively manage Safety, Health, Environment, Risk, and Quality activities in one centralised, easy-to-use platform. Designed with practical compliance needs in mind, SHEQsys enables users and managers to seamlessly log, investigate, report, analyse trends, and close out key processes through dedicated, yet fully integrated modules.

- ✔ Integrated and customisable modules
- ✔ Cloud-based access from anywhere
- ✔ Real-time reporting and tracking
- ✔ Dashboards and analytics
- ✔ Extensive investigative tools
- ✔ Automated notifications and reports
- ✔ Secure user access and permissions
- ✔ Offline mobile application
- ✔ Schedulers
- ✔ Support and training

WORK THE WAY YOU WANT

SHEQsys is a flexible framework that adapts to your unique organisation. Switch modules on or off, customise terminology to match your industry, and scale the system as your business grows.

REPORTS AT YOUR FINGERTIPS

Extensive reporting with custom filters is included across all modules of SHEQsys, from lists to graphs and trend pareto analysis. Analyse the data, discover the trends, make informed decisions.

DON'T MISS ANYTHING

Relevant users and managers are automatically emailed notifications of new entries and actions for their attention, as well as scheduled overdue reports.

UNLOCKING SHEQsys

Each of our modules works independently or in perfect harmony with the others, delivering real-time visibility, automated workflows, and intelligent trend analysis that drives measurable improvement and regulatory compliance (ISO 45001, ISO 14001, ISO 9001, NOSA, OHSAS, and industry-specific standards). With an intuitive, modern web interface and built-in step-by-step wizards, even occasional users can navigate the system confidently, reducing training time and increasing adoption across all levels of the organisation.

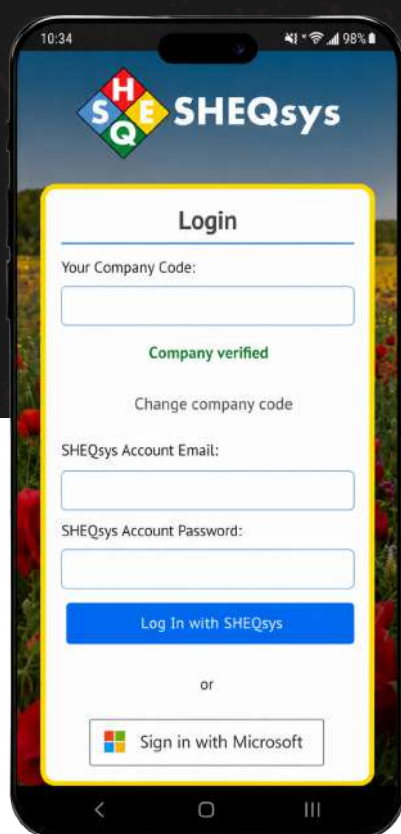

SHEQsys offers the robustness, security, and scalability that all environments demand, without the complexity. Turn compliance into a competitive advantage.

◆ AUTHENTICATION

SHEQsys supports Microsoft Entra ID and Google Identity out-of-the-box, providing centralised enterprise-grade security and access management, enabling true single sign-on. Reducing administrative overhead and risk, as well as conforming to IT department policies and requirements such as Multi Factor Authentication (MFA).

◆ AUTHORISATION

This integration not only strengthens compliance with data protection and information security requirements (ISO 27001, ISO 45001, and POPIA/GDPR), but also ensures only authorised personnel gain access to sensitive SHEQ data such as incident reports, risk assessments, and audit findings. The result is faster adoption, improved productivity, and peace of mind that your SHEQ system is protected by proven, scalable security infrastructure.

SHEQ ON THE GO

With the SHEQsys mobile application in their pocket, give your team access wherever they are.

- ✓ Checklists at your fingertips
- ✓ Log incidents immediately
- ✓ Conduct new and scheduled audits
- ✓ Close job cards in real time
- ✓ Dynamic risk assessments

CORE MODULES

The core functionality of SHEQsys includes modules that are used across the system and can be generated for all SHERQ types.

Incidents

Determine Root Causes by logging and investigating non-conformances, near misses, and observations.

Audits

Schedule and conduct different types of audits utilising custom created templates with linked scoring and severity.

Document Register

Distribute controlled company documents and ensure access to the latest approved revision.

Risk Assessment

Identify process and system risks and implement mitigation controls with structured tracking.

Action Framework

Create and assign actions directly from within modules. Track completion of all actions in one consolidated grid and through reporting tools.

Product Records

View a full history of all entries where a specific product is associated, for complete traceability across all modules.

FACILITIES MANAGEMENT

Identify trends and generate reports for easy review, allowing you to keep track of all your items within SHEQsys from inventory and calibration to planned maintenance and breakdown control.

Asset Register

Track maintenance schedules, calibration records and asset performance for instruments, vehicles, machines and more.

Production

Measure total production output, planned and unplanned downtime, speed loss, scrap and rework to accurately calculate Overall Equipment Effectiveness (OEE).

Stock Room

Manage stock of items such as PPE, consumables and spares. Maintain accurate stock counts and ensure critical items are available when needed.

Checklist

Schedule and complete required inspections for equipment, vehicles, and facilities.

Job Cards

Manage and complete assets' breakdown, planned, and preventative job cards efficiently.

Utilities Management

Record and track monthly spending and usage data.

PEOPLE MANAGEMENT

Manage your relationships, not only with your customers and suppliers but with your employees and their skills development and progress within the organisation.

Feedback

Capture constructive feedback and automatically route it to the responsible manager.

Training

Schedule courses, record attendance and manage assessments.

Call Reports

Log customer or supplier visits and track follow-ups.

Customer Interaction

Track and manage customer-related communication.

Supplier Records

Manage supplier relationships and grant suppliers guest access to engage with associated entries within the system.

Employee Records

Set termination and visibility of system users and employees while viewing all entries associated to the employee.

Employee Reviews

Conduct performance reviews against predefined KPIs. Monitor progress, identify development areas and align with objectives.

Appointment Letters

Formally designate official responsibilities to key individuals with allocation reminders.

CHANGE CONTROL

Manage your organisation's changes of documents, procedures, services and products all within one system.

Meeting Minutes

Create and manage meetings, including recurring sessions, with full historical records.

Document Request

Request a change to an existing document or for a new document to be authored.

Concession

Request special approval for non-conforming products or services.

Innovation

Capture and implement innovative ideas across the organisation.

Design Review

Assess and review designs against defined criteria before implementation to reduce risk.

Lessons Learned

Record lessons identified from incidents and link them to multiple related cases to prevent recurrence and support continuous improvement.
